

Project Progress Report (10% of course grade)

Total: 100 points

Focus: *“Can you build and run your system?”*

1. Core Pipeline Implementation — 25 pts

Substantial implementation progress (~50% or more of pipeline working end-to-end).

2. Running Demo (Required) — 25 pts

Clear demonstration of the pipeline working (even in **overfitting / controlled setting**). Note that you may show results on training/validation cases and discuss appropriate steps you need to take to extend it to a wider setting such as industrial setting or out-of-domain setting for the final project demos. Must show a working system even if it is on a tiny dataset, partially complete etc.

3. Baseline Implementation — 15 pts

At least one **naive / zero-shot / simple baseline** implemented for comparison. Clearly state what you used as your initial baseline and how you built upon it, what features you added and what is the performance improvement of these added features.

4. Preliminary Results — 15 pts

Initial qualitative and/or quantitative outputs from both method and baseline.

5. Debugging & Engineering Effort — 10 pts

Evidence of meaningful engineering progress (data processing, training setup, fixes, etc.). What challenges occurred along the way and how you mitigated them to make the pipeline work.

6. Initial Analysis — 5 pts

Basic discussion of what is working, failing, and why. What features still need to be implemented and how you will achieve those.

7. Remaining Work Plan — 5 pts

Concrete next steps toward a complete system (no repetition of proposal content).

Final Project Report (10% of course grade)

Total: 120 points

Focus: *“Does your method work, and do you understand it?”*

1. Final Method & System Design — 10 pts

Clear, refined pipeline with improvements over baselines as detailed in the initial proposal.

2. Implementation Completeness — 10 pts

Fully working system with all major components integrated. A final system demo either offline or online is to be shown in the presentation.

3. Quantitative Evaluation — 15 pts

Comparison against **at least one baseline** with clear metrics and tables.

4. Qualitative Results — 15 pts

Visual evidence demonstrating strengths/weaknesses of the method when compared against the baselines i.e. where the method succeeds but baseline fails.

5. Ablation Study and comparative analysis — 15 pts

At least **3 meaningful ablations** (e.g., components, losses, design choices). Clear explanation of **where your method works and where baselines fail**.

6. Failure Cases & Limitations — 5 pts

Honest discussion of weaknesses and edge cases.

7. Clarity & Organization — 10 pts

Well-structured, readable, research-style report with pipeline, qualitative figures, appropriate tables etc. Must not extend 6 double-column CVPR style format. Final report should be in CVPR style format.

8. Final Presentation — 20 pts

Well-structured final presentation summarizing all key aspects of the projects above.

8. Working Inference Code — 20 pts

Submit a final working inference code with clear instructions on how to setup, run the code, what checkpoints to download and how to get evaluation metrics.
